hiPSC generation** from fibroblast/blood	1 donor	2 200 €	3 113 €	6 213 €
Early hiPSC generation** from fibroblast/blood	1 donor	1 000 €	1 436 €	2 678 €
Miscellaneous	1 h	25 €	33 €	86 €
Genome editing		On demand		
Endoderm lineage diff.		On demand		

* 2 characterized iPS clones frozen at passage ten and 2-4 uncharacterized clones frozen at passage 3. Characterization of iPS clones included in the price:

- Morphology comparison of iPSC to hESC
- Maintenance in culture as the established line for ten passages. Only clones surviving, as typical pluripotent stem cell colonies for an extended period are likely to be bonafide stem cells
- Human ES cell surface antigen profile
- Expression of the endogenous pluripotency-associated genes
- Evidence of transgene presence/absence using PCR
- Viability of frozen stock

** 4-6 uncharacterized iPS clones frozen at passage 3.

* and ** We guarantee the derivation of two hiPSC lines from the cells provided by the client. In the case reprogramming is not successful, there will be no charge for this attempt.
