Pathways to Sustainability Transformations: 12 May, 2017

Results

- Farmers mainly supported results-based approach
- Implementation challenges: institutional reluctance, knowledge of best practices, verification (indicators)
- ‘Producing biodiversity’ builds on farmers’ dispositions towards productive farmland

Take home message:

- ✧ Results-based approach for biodiversity has potential in Finland
- ✧ Focusing on results instead of actions requires new thinking from payment bodies and farmers.
- ✧ Piloting is needed!
