

# The Rickman-Picard theorem

Mario Bonk

University of California, Los Angeles

In 1980 Seppo Rickman proved a remarkable generalization of the classical Picard theorem for quasiregular maps: every non-constant  $K$ -quasiregular map from  $\mathbb{R}^n$  into the  $n$ -sphere can omit at most  $q$  points, where  $q$  depends only on  $n$  and  $K$ . This has inspired much subsequent work by other researchers. In my talk I will give a survey of some recent developments in this area.
